Sample Problem Statement

Title of the Study: E-Book Management System

Harshavardhana B – 2023BCSE07AED499

CSE General

---

1. Introduction

An E-Book Management System is a software application designed to digitally store, manage, and provide access to electronic books. With the increasing use of digital learning resources, there is a strong need for an efficient system that allows users to search, read, and manage e-books securely and conveniently.

2. Background of the Problem

Traditional libraries and physical books face several limitations such as limited availability, physical storage issues, manual record keeping, and lack of remote access. Existing digital platforms may lack offline access, proper organization, or secure user authentication. These issues highlight the need for a structured and user-friendly e-book management solution.

3. Statement of the Problem

Despite the availability of digital books, many users face difficulties in organizing, accessing, and managing e-books efficiently. Problems such as unreliable internet connectivity, lack of offline access, poor search functionality, and insecure login systems reduce usability. Hence, there is a need to develop a reliable E-Book Management System that ensures secure access, efficient book management, and both online and offline availability.

4. Objectives of the Study

The objectives of the E-Book Management System are:

- To provide a secure user authentication system.
- Guest can only browse Categories
- To allow users to search, view, and download e-books easily.
- To support offline access using a local database when cloud services fail.
- To enable administrators to manage books and users efficiently.
- To improve accessibility and reduce dependency on physical books.

5. Significance of the Study

This system benefits students, educators, and institutions by offering easy access to learning materials anytime and anywhere. It reduces physical storage requirements, supports digital learning, and ensures continuity of access even during network failures through local data storage.

6. Scope of the Problem

The scope of this project includes:

- User registration and login
- Online cloud storage of e-books (Firebase)
- Offline storage using a local database
- Search and download functionality
- Admin control for book management
